PROFESSIONAL PROFILE

FULL STACK SOFTWARE ENGINEER
A full stack software engineer is a developer who has the skills and expertise to work on all layers of a web application, from the front-end user interface to the back-end server-side logic and database. They are proficient in multiple programming languages, frameworks, and tools that are used to build and maintain complex web applications. Full stack software engineers can take on a wide range of tasks, from designing and implementing user interfaces, to building scalable server-side applications, to configuring and maintaining infrastructure.
