As a Senior Android Developer, you will need to learn the company's Android code-base and Android development processes quickly, and then use your skills and abilities to implement and enhance features and products in our family of Android sports apps. We are looking for a Android Native Developer who is interested in building performant mobile apps on both the iOS and Android platforms. You will be responsible for architecting and building these applications based on our React web application. You will also be responsible for coordinating with the teams responsible for other layers of the product infrastructure. Building a product is a highly collaborative effort, and as such, a strong team player with a commitment to timely teamwork and clear communication is required.

Responsbilities:

- You will be working to develop and prototype native Android apps and Android features for the official mobile apps of sports teams and leagues
- You will participate in the complete app life-cycle, including concept, requirements, design, build, deploy, test, and release to the Google Play Store
- You will work closely with the UI/UX and Backend teams in implementing various Android features in our apps
- You will work with Product Owners on new product ideas, designs, and prototypes for sports teams and leagues
- You will be responsible for writing high-quality code and using good programming practices in implementing various features and products
- You will be interfacing with our clients to discuss and refine product requirements, and to solicit clarifications and answer questions related to the Android features and apps you are developing

Skills:

A++, Accounting, Account Management, Java, Adobe Photoshop, Advertising, Contract Negotiation, Analytical Skills,

Requirements:

- Bachelor's degree in Computer Science, Computer Engineering, or equivalent.
- 3+ years of mobile application development experience
- Deep knowledge of iOS and Android. Understanding of mobile app design guidelines on each platform and being aware of their differences
- Strong experience both using and building SDKs.
- Experience in creating smooth and performant animations
- Clear and concise written and oral English communication skills.
- Proficiency in Git-based source code management
- Enthusiasm about building interactive visual experiences that harness the

power of modern hardware.

Minimum Requirements:

- Portfolio of published apps in the Google Play Store. Please provide links to published Android apps. Please also indicate which portions of these Android apps you were involved in developing.
- Experience with Object-Oriented Programming, Kotlin, Java and Git.
- 4+ years Android native application development experience.
- 4+ years Java development experience.
- Experience with Firebase Cloud Messaging, Analytics, Crashlytics.
- Experience with consuming APIs and interfacing with backend services, including familiarity with JSON, REST and XML.
- Strong knowledge of Android memory management, process lifecycle, threads and thread handlers.
- Experience building Android products that target a wide range of devices (Android versions, device sizes, manufacturers)
- Experience integrating third-party SDKs and APIs.
- Experience in translating design mockups (in Zeplin, Figma, etc.) into production-quality functioning Android app interfaces.
- Experience using Git for version control, including branching, merging, and resolving conflicts.
- Strong CS fundamentals in algorithms, data structures, networking, memory management, distributed systems, and relational databases.
- Willingness and ability to work the non-traditional hours of the sports industry.
